Thou Shalt Not Love

— A NOVEL BY —
GEORGIA GRAIG

CHAPTER XIV.—Continued

She knew Stephen had more powers in the extra luggage the colored woman had brought along. Feverishly she hunted for them, tossing lovingly expensive vials, boxes, every which way, here and there. At last she found the box she recognized. It was filled with little packages. She moved across the floor with them to the table on which the glass of water was all ready for her. With shaking fingers she began opening the little packages, one after the other, counting—one, two, three, four... She emptied them all into the glass, strange excitement possessed her. She must hurry, hurry, hurry, before someone came to stop her. The liquid foamed right to the top of the glass, a life-giving looking sort of liquid which was a lar—which effervesced in its foaming, a taste of life's effervescence. Start picked up the glass.

With a gesture of bravado, she held it up in a toast, in just the same way that "Play-Girl" had lifted her champagne glass to meet the laughing, admiring face of some man.

A man's hand stretched out and gripped glass from her fingers. The white liquid, not through its effervescence, foamed again, and the beige rug of one of Stephanie Dale's guest rooms.

"Too late!" Her fear had not been imaginary. Again she was laughing. Her hurry had not been sufficient.

The blurred figure beside her in the mirror took down the champagne glass, choked out a sharp cry, swinging around.

"Michael!"

To Alkalize Acid Indigestion Away Fast

People Everywhere Are Adopting This Remarkable "Phillips' Way"

The way to gain almost incredibly quick relief from stomach trouble arising from overeating is to alkalize the stomach quickly with Phillip's Milk of Magnesia.

You take either two teaspoons of liquid Phillip's or one of the two Phillip's Milk of Magnesia Tablets. Get out the "Phillips' Way" from over-indulgence in food or smoking—and nausea are relieved. You feel more comfortable and your stomach is happy.

Try this Phillip's Way if you have any acid stomach upset. Get out the "Phillips' Way" from over-indulgence in food or smoking—and nausea are relieved. You feel more comfortable and your stomach is happy.

ALSO IN TABLET FORM—each with tablet in the shape of a star, and a glass of water to dissolve it.

MADE IN CANADA

PHILLIPS' MILK OF MAGNESIA

He said sharply: "You won't need a sedative tonight!"

He did not understand, of course, just what he had interrupted. He had never understood Start from the beginning. He never would.

He looked very big and masterful, and altogether too much of any woman's ideal of a man as he stood there, not far behind Start, framed in the open doorway to the terrace. His gray eyes were glowing with a strange fire that was not of this modern generation at all, but of the olden days, recognizable as the fire that might have glowed in the eyes of any strange child of Arabys. Modern, yes—tremendously, vitally so.

His hard young mouth curved recklessly. The sleek lines of his wavy hair which he always sought to repress had broken into little ruffled waves, wet and unruly.

Start did not know how she found her voice. It was a strange, muffled voice that asked:

"What are you doing here, Michael? What do you want?"

He gave a short laugh. "What should I want in a lovely, dangerous woman's boudoir at midnight... The answer ought to be obvious."

Daggers of ice pricked Start's spine. Here was a situation which was entirely foreign to her. One with which she did not know how to cope for the simple reason that it was completely out of the scheme of all her experiences. She met it unprepared.

"We haven't anything to say to each other, Michael-Hassan," she said coldly, deliberately using the nickname which would presuppose her lack of interest.

His lip curled. "Haven't we, Start?"

He was moving closer. He was overwhelmingly close, boring her through with those relentless gray eyes of his. He said, as smoothly as though they were discussing the next day's program:

"On the contrary, my dear, I think we have a lot to say to each other. We've been fooling ourselves, you and I, playing a game of bluff. But I've seen through it. And you, you, you, you can't trifles with emotions which are stronger than men. You didn't really think that things could be like this, did you?"

The grim determination of his face added deep significance to his words. Start took a shivering backward step away from him. Her face, frail hair held against her lips in terror, she breathed:

"Michael, have you gone crazy?"

That strange laugh echoed again. Michael threw back his head to give freedom to his cry.

"Crazy? Yes! Sure I'm crazy. I'm crazy about you—mad as a June hatter. I hate you, and yet I can't keep away from you. Ridiculous! That, will you? You're a devil, a demon, the burning sun, a real enigma of the desert, if the truth were known, and you've bewitched me! You're unadmirable, but I love you! You're poison in my blood!"

Start cried out wildly, keeping her voice as repressed as emotion would permit.

"Michael! You're insane! You mustn't say such things! Here in Stephanie Dale's house, and you're going to marry her!"

"I'm not going to marry Stephanie Dale," Michael contradicted grimly. "I'm not that stupid of cad. It wouldn't be fair to her, with your shadow between her and me—which it would be—always! I'll always be branded as the sort of cad they know about by everybody who knows me of course. I'm expecting that. I'm prepared for it. It doesn't matter in the slightest. . . . Nothing matters, except that I want you!"

Step by step he came forward, straight into the tortured pools of her long black eyes he looked, her mysterious eyes. This time he was too blinded by his own passion to see the selection of her eyes which was marveled at. His hand against her was marveled at. His hand against her was marveled at.

"If you want to play, I'll play with you. You want to play with me now, tonight? Oh, I'll tell you the way you like it—all play! We'll jazz up the wedding march, burlesque the marriage vows—make a playground of marriage! We'll play—and love!"

Marriage! That one incredible word stuck in Start's throat.

Oh, this was all preposterous! It was all mad like a nightmare dream brought from China to Europe by Portuguese traders in the seventeenth century, and Paris was the centre of fashioning. In 1865 King Louis XIV, expelled all his Protestant subjects and some of them brought the art over to England. The Palladian Company of London dates from 1700.

Start was joking, of course. He must have had more to drink than she had thought, and this was his idea of a well-earned treat to a party, and a get even.

She was wrong. She saw that on the instant of seeing Michael's face plainly in her dim boudoir light. He meant what he said. He had never been more deeply in earnest. The de-

stant net of his firm, lean jaw spoke of a ruthless purpose.

Start felt torn inside from the force of their conflicting thoughts and emotions. There was the part of her that wanted Michael more than she would anything else on earth or heaven, even in spite of the cavernous way he would take her—perhaps because of it. She was not sure. On the other hand, there was the deep voice of conscience, warning her that she had not the right to marry any man, not even Michael. Oh, most particularly Michael! Her sacrifice to that ideal had already been placed on the altar.

There was the distance. . . . There was a throbbing like the beat of tom-toms in her veins, like the rhythm of the drums of stretched goatskins heard in the desert, never forgotten. . . . Primitive passions, fighting for freedom. Passions the most effete civilization could never deny.

Start swung her silent battle, the lights flickering before her like tantalizing pinpoints of beckoning temptation. Then—It was through broken lips that she uttered:

"You're completely raving crazy, Michael Fairbourne! I wouldn't marry you if you were the last man on earth. Why should I?"

"Of course I don't expect you to settle down and raise babies. I know better than that now. Ours will be a play marriage, like all the rest of your playing, except that it will be real, as far as you're concerned. Our play-marriage will end tonight. Tomorrow I'm going away and I don't know where. It doesn't matter. The wedding ceremony will be a memory between us. . . . To me it will be a safeguard to save me from ever making a fool of myself over a woman again."

Start's eyelids and her breath seemed driven out of her body as her eyes closed to shut out the pain. Everything else had been offered her—and now this! Play-girl bride for a night to satisfy a man's bitter desire for revenge! Was she to suffer this final humiliation before her father's barbed out?

A desperate silence waited then. He was waiting for her to speak. A desperate thought was milling around in her brain. Suppose someone came—found them? Stephanie. . . .

Someone she must get Michael out of this room. Perhaps outside she could reason with him.

The seriousness that had tensed her words before changed to lightness. She glanced down at the fineness of her white silk nightgown and the gauziness of the chiffon negligee that she wore. She smiled ruefully, and when she spoke, she seemed to give in.

"All right, Michael-Hassan, I'll agree with a rippling, subdued laugh. "Have it your own way. You always do. Only give me a chance to slip into something in which I won't freeze to death." She gave him a playful shove. "Go on and get your car, and don't make too much noise about it!"

(To Be Continued)

Says Climate Changing

Rivers Of Western Canada In Danger Of Drying Up

If the Rocky Mountain glaciers continued melting, in the opinion of Dan McCowan, western Canada's rivers will have dwindled "almost to nothing" in the next 500 years.

The glaciers which the Banff national park described as the "reservoirs of the prairies, are decreasing slowly," McCowan told the Montreal World's Club.

"The climate is changing in the Rockies," he said. The glaciers are long gone in the summer than they were in the winter. If this continues, rivers like the Saskatchewan will have dwindled almost to nothing in 500 years.

"The only thing we can do," declared the noted naturalist, "is to plant more trees to conserve the moisture."

Art Of Fan Making

Was Known In China Many Thousands of Years Ago

Fans made of peacocks' feathers were used in China in 5000 B.C., and there is one in the Cairo Museum 4,000 years old. The industry was brought from China to Europe by Portuguese traders in the seventeenth century, and Paris was the centre of fan-making.

In 1685 King Louis XIV, expelled all his Protestant subjects and some of them brought the art over to England. The Palladian Company of London dates from 1700.

Along Luzon mountain, Philippine Islands, are hundreds of beds of Igorotes, clothed and sitting in groups resembling "picnic parties" that have been there for years and have been perfectly unmolested by the hot, dry air.

DAD GIVES A GOOD TIP

British Yacht Challenger

Sopwith To Bring Two Yachts To Contest America's Cup

Endeavour II, T. O. M. Sopwith's challenger for the America's cup, will leave Gouport for New York early in May, the New York Times reports. She will be accompanied by Endeavour I, the old challenger, against whom she will race before the cup contest.

It is still possible that Endeavour I, which represent Great Britain in the series, according to the Times, Sopwith is uncertain which of the two boats is superior. A combination of bad weather and racing mishaps to Endeavour II, last summer prevented effective competition. The rules of the competition require only that the challenging boat be faster than the old one by 30 days before the match.

Neither boat will race in England before leaving. Mr. Sopwith said he hoped the two boats would have six weeks of sailing on this side before the cup contest begins July 31.

The cost of sending out Endeavour I, as a trial boat is being borne by a syndicate of British yachtmen.

Smallest Steam Engine

Less Than Half An Inch High And Perfect In Every Detail

What is stated to be the smallest steam engine in the world is now in Canada. It is less than half an inch high, about the size of a three penny bit, and is perfect in every detail.

It is the work of J. M. Ewing, of Knapex, who planned to exhibit it at the Empire exhibition. The exhibition authorities, however, would not take the risk of exhibiting it in view as they were afraid it would be pocketed.

Mr. Ewing stated that it is a three-cylinder double-acting piston valve reversing gear steam model engine. It has a bore of three sixteenths of an inch and a stroke of one-tenth of an inch. There are about 200 parts in it.

Finland's army flyers had adopted the swastika as insignia for their planes in 1917, long before Adolf Hitler came along.

According to the Smithsonian Institution there are 300 dialects in the 45 stock Indian languages.

Aerial Survey

Can Measure Height And Girth Of Trees By Photography

Canada has led the world in developments of aerial survey. H. E. Selye of Ottawa, in charge of the forestry survey branch, department of mines and resources, told the Canadian Society of Forest Engineers.

From the aerial photographs tree heights could be determined from the shadows they cast, he said. Tallies had to be worked out for location, season and time. A table had also been worked out for diameter breast height.

He said the work would not be completely accurate as far as the individual tree was concerned, but that only an accurate average was desired. Ground surveys had tallied with the aerial averages worked out in the office. The height might be out as much as 10 feet in a single tree but the average was out less than a foot.

Cannot Be Abolished

Speed Limit Essential As Long As Drivers Are Stupid

Surely, it requires no argument to prove that risk increases proportionately to speed. With all the modern mechanical refinements and technical safeguards it is, after all, the human factor which counts most in ensuring safety. A car bounding along at 70 or 80 miles an hour is not under proper control and is a peril to itself and to other vehicles. Experts agree that to drive above 40 miles an hour is to invite disaster.

While something might be said for stepping up the speed limit to something in view of recent developments in the automobile industry, to abolish it altogether would be to surrender to the demands of the reckless, the selfish and the inconsiderate.

Hamilton Spectator.

No one, we feel certain, will be disposed to question the appointment of that Toronto interpreter who is able to converse in Russian, German, the Estonian, Serbian, Macedonian, Czechoslovakian, Bulgarian, Jewish, Lithuanian, Polish and English—a veritable babel in himself.

MacTight: "Do ye think I will pull through, eh?"

Dr. MacPee: "Weel, Sandy, if I were you I would nae get more'n half a bottle of medicine this time."

Ten is said to be the world's most popular beverage.

The Champion Chronicle

L. A. STARCK
Editor and Publisher

Thursday, January 21, 1937

The reporter wrote it, "forty eight men were at the meeting." The printer made it read forty eight men, and the editor has been hiding under the barn.

In these days of human complexity taxation becomes a subject that terms with equanimity. There is none more striking than the seemingly careless indifference with which the citizenry is loaded with the steadily rising and oppressive taxes on commodities of common use. Gasoline for instance is a good example. With legislators about to swing into action, there is already behind-the-scenes talk of new levies on other articles.

By and large over the North American continent, gasoline taxes of one variety and another have been running around 10 per cent of the cost of production. With the sole exception of alcohol and cigarettes—these commodities can scarcely be ranked in the same category as motor fuel—there is no item that bears a tax burden of like proportions.

When one collects the figures, they are little short of amazing. For 1935 these taxes in Canada and the United States, reached a total in excess of \$80,000,000. But this is not the whole story, nor is it by any means the gross total of taxes paid by automobile owners as such. The figures for 1936 are not available but they are likely to exceed \$1,500,000,000. The heaviest of the levy is assessed by the distance that it is more than five times the levy paid by all the Class "B" drivers of the continent.

Important News for Our Readers

Here is an opportunity that you will not want to miss. We are offering a yearly subscription to The Champion Chronicle and The Calgary Herald (both for \$8.40).

You need your own Home Town Paper to keep you in touch with local affairs. The yearly subscription to The Chronicle is \$1.50. You would not willingly lose touch with events and developments of World wide, national and provincial importance. The Calgary Herald, the outstanding daily of Southern Alberta gives you a complete daily news service. A yearly mail subscription to The Calgary Herald costs about \$7.00.

You need both these Newspapers. Get them both at this low combination rate.

Just fill in your name and address in the coupon below and send with \$8.40 to The Champion Chronicle.

The Champion Chronicle,
Champion, Alberta.

I accept your special subscription offer of The Champion Chronicle and The Calgary Herald — The Champion Chronicle to be delivered weekly for one year from date. The Calgary Herald to be mailed daily for one year from date. I enclose \$8.40 in full payment.

Winter Care of Brood Mares

It is estimated that only about 60 per cent of the mare bred each year produce living foals and while this condition cannot be attributed to any single cause it is certain that the lack of proper care of the pregnant mare is one of the important reasons for this low percentage of foals produced. Further, it may be safely stated that a fair proportion of the unsoundness which appear in young horses may be attributed directly to either accidents or lack of proper nutrition while the foal was still in the dam's body.

Breeding the working mare places a double duty on her and consequently it is only right that she should receive something better in the way of feed and care than the farm gelding. Moreover since an unfed mare promises to provide two sources of income, farm power and a colt, she is likely to return greater dividends for any extra feed and attention spent on her than will the other draft animals on the farm.

This does not mean that the pregnant mare should be pampered by overfeeding and lack of exercise. On the contrary, the mare will be healthier, parturition easier if she is used on slow light work nearly every day. Heavy work requiring strain or excitement is better left to open mares or geldings.

Since she requires feed both for the maintenance of her own body and for the development of the fetus, the in-foal mare should receive something more than a bare maintenance ration. At the same time the quality of the ration is just as important as the quantity. The demands of the fetus are particularly heavy for protein to be used in the development of muscle tissue and for minerals, notably calcium and phosphorus for the development of bone.

Legumes hay fed either alone or mixed with a grass hay, or even with a small amount of straw, makes a good roughage ration for brood mares. If the mares are idle a liberal allowance of high quality

roughage alone will usually be sufficient to keep them in good condition, but if they are at work or for any reason do not appear thrifty an effort should be made to feed some grain. Oats is perhaps the best single grain for horses. It is safe, light, palatable, and fairly well balanced. Twenty-five per cent of wheat bran included in the grain ration has a beneficial regulatory

and conditioning effect.

At this station pregnant mares have access to a mixture of 20 per cent of monocalcium phosphate and 80 per cent salt in a mineral box. The inclusion of 20 per cent of monocalcium phosphate with the salt is a good method of insuring that ample amounts of calcium and phosphorus for bone development are being supplied. Where there is

any danger of iodine deficiency in the diet (and these areas are quite extensive in Alberta) pregnant mares should be fed an iodine supplement. This may be supplied by dissolving one-quarter teaspoonful of potassium iodide in a small amount of warm water, and feeding this mixed with grain to each pregnant mare at intervals of two weeks from January 1 to foaling time.
